Software to fill out pdf forms Adobe made significant changes to the user interface of Acrobat X, the current version of the widely-used program for creating and sharing professional-level PDF files.. Autore: Adobe www adobe com/uk/creativecloud html MD5 Checksum: 14CF5B88E33ED8678CE2731BD5845422.. Now you can set them however you want. You can use the same tip as above if you want them all the same: select the desired items from the list, then click the multiline option once to set them all the same.. We don't have any change log information yet for version 2018 011 20055 of Adobe Acrobat Reader DC for Mac.. Had this same issue: Selecting them all is possible by selecting the fields LIST on the right menu, under TOOLS >> EDIT >> FIELDS.. Then Select all the fields in the list that you want to modify Make the desired changes, and make sure all the fields in the list are highlighted.. You sohuld see a list of all the fields in the document and you can select them all.. Sometimes publishers take a little while to First double click on a random field, to bring up the properties window.. Selecting them as a group in the actual document didn't work, for me at least If using the auto-detect fields option remember Acrobat tries to guess which are multiline and which aren't, so it's good to double check.

Like many design changes, the new layout is jarring for people familiar with Acrobat 8 and 9 but most of it works well after you become familiar with it.
